re: SCP/Carlstadt Site
Admin. Orders Index Nos. II-CERCLA-50114
and II - CERCLA - 6012

Dear Ms. Feldstein:

In response to your inquiries during our meeting on
Friday, April 14, 1989, I offer the following information:

1. We anticipate that the written protocol for the air emissions risk analysis, to be included in Appendix I of the Feasibility Study for the First Operable Unit will be delivered to you by the first week of May.
2. ERM is still waiting for the final treatability report from Hazcon. We are attempting to verify when it will be received.
3. Dames & Moore has been requested to forward to you under separate cover its 1989 evaluation of the discharge from the shallow ground water unit to Peach Island Creek, which report ERM cited as a reference in the Feasibility Study for the First Operable Unit.

Page -2-

4. Other documents, articles and references cited by ERM in the Feasibility Study for the First Operable Unit are being compiled and will be retained at ERM's offices.
5. The EP Toxicity test data about which Mr. Rooney inquired are being compiled and a written summary is being prepared. A copy of this information will be provided to you under separate cover when compilation is completed.
6. You inquired about a map on which ERM had sketched concentrations of certain materials at the site. This map was prepared in the very early stages of FS preparation, under the direction of Steve Croce. ERM personnel have not yet located this map and are attempting to learn whether Mr. Croce may still have it. Should the map be located, a copy will be forwarded to your attention. However, inasmuch as the map is based only on data reported in the Remedial Investigation document, the information depicted on that map is readily available from the RI.

Please feel free to call if you have any further questions.

Sincerely,

Susan E. Hoffman
